NASA admits that climate change occurs because of changes in Earth's solar orbit, and NOT because of SUVs and fossil fuels

Friday, August 30, 2019 by: Ethan Huff

(Natural News) For more than 60 years, the National Aeronautics and Space Administration (NASA) has known that the changes occurring to planetary weather patterns are completely *natural*

and *normal*. But the space agency, for whatever reason, has chosen to let the man-made global warming hoax persist and spread, to the detriment of human freedom.

It was the year 1958, to be precise, when NASA first observed that changes in the solar orbit of the earth, along with alterations to the earth's axial tilt, are both responsible for what climate scientists today have dubbed as "warming" (or "cooling," depending on their agenda). In no way, shape, or form are humans warming or cooling the planet by driving SUVs or eating beef, in other words.

But NASA has thus far *failed* to set the record straight, and has instead chosen to sit silently back and watch as liberals freak out about the world supposedly ending in 12 years because of too much livestock, or too many plastic straws.

In the year 2000, NASA did publish information on its Earth Observatory website about the Milankovitch Climate Theory, revealing that the planet is, in fact, changing due to extraneous factors that have absolutely nothing to do with human activity. But, again, this information has yet to go mainstream, some 19 years later, which is why deranged, climate-obsessed leftists have now begun to claim that we really only have 18 *months* left before the planet dies from an excess of carbon dioxide (CO2).

The truth, however, is much more along the lines of what Serbian astrophysicist Milutin Milankovitch, after whom the Milankovitch Climate Theory is named, proposed about how the seasonal and latitudinal variations of solar radiation that hit the earth in different ways, and at different times, have the greatest impact on earth's changing climate patterns.

Naturally high in potent curcuminoids. Delicious formulations. All purchases support this website (as well as your good health). See availability here.*

The below two images (by Robert Simmon, NASA GSFC) help to illustrate this, with the first showing earth at a nearly zero orbit, and the second showing earth at a 0.07 orbit. This orbital change is depicted by the eccentric, oval shape in the second image, which has been intentionally exaggerated for the purpose of showing the massive change in distance that occurs between the earth and the sun, depending on whether it is at perihelion or aphelion.

Variation in Orbital Eccentricity
eccentricity = 0

“Even the maximum eccentricity of the Earth’s orbit – 0.07 – it would be impossible to show at the resolution of a web page,” notes the *Hal Turner Radio Show*. “Even so, at the current eccentricity of .017, the Earth is 5 million kilometers closer to Sun at perihelion than at aphelion.”

For more related news about climate change and global warming from an independent, non-establishment perspective, be sure to check out ClimateScienceNews.com.

The biggest factor affecting earth's climate is the SUN

As for earth's obliquity, or its change in axial tilt, the below two images (Robert Simmon, NASA GSFC) show the degree to which the earth can shift on both its axis and its rotational orientation. At the higher tilts, earth's seasons become much more extreme, while at lower tilts they become much more mild. A similar situation exists for earth's rotational axis, which depending on which hemisphere is pointed at the sun during perihelion, can greatly impact the seasonal extremes between the two hemispheres.

Precession

Based on these different variables, Milankovitch was able to come up with a comprehensive mathematical model that is able to compute surface temperatures on earth going way back in time, and the conclusion is simple: Earth's climate has *always* been changing, and is in a constant state of flux due to no fault of our own as human beings.

When Milankovitch first put forward his model, it went ignored for nearly half a century. Then, in 1976, a study published in the journal *Science* confirmed that Milankovitch's theory is, in fact, accurate, and that it does correspond to various periods of climate change that have occurred throughout history.

In 1982, six years after this study was published, the National Research Council of the U.S. National Academy of Sciences adopted Milankovitch's theory as truth, declaring that:

“… orbital variations remain the most thoroughly examined mechanism of climatic change on time scales of tens of thousands of years and are by far the clearest case of a direct effect of changing insolation on the lower atmosphere of Earth.”

If we had to sum the whole thing up in one simple phrase, it would be this: The biggest factor influencing weather and climate patterns on earth is the *sun*, period. Depending on the earth’s position to the sun at any given time, climate conditions are going to vary *dramatically*, and even create drastic abnormalities that defy everything that humans thought they knew about how the earth worked.

But rather than embrace this truth, today’s climate “scientists,” joined by leftist politicians and a complicit mainstream media, insist that not using reusable grocery bags at the supermarket and not having an electric vehicle are destroying the planet so quickly that we absolutely must implement global climate taxes as the solution.

“The climate change debate is not about science. It is an effort to impose political and economic controls on the population by the elite,” wrote one commenter at the *Hal Turner Radio Show*.

“And it’s another way to divide the population against itself, with some who believe in man-made global warming and some who don’t, i.e. divide and conquer.”

I find it interesting how many of those who have made millions on the climate change hoax have mansions right on the beaches around the country and world. If they truly believed all the crap they have been spewing why would they put so much money at risk knowing that their homes would be flooded and destroyed? CO2 has been pumped as the largest component of greenhouse gasses but it actually is among the least in volume the largest is actually water vapor. There seems to be this fale idea as well that we are generating carbon and so we need to buy carbon credits to offset our carbon footprint. The total amount of all elements on the earth has changed insignificantly from the amounts at the very beginning. Some gaseous molecules escape into space but very little and inconsequentially small amounts of elements are added from meteors that fall onto the planet Earth from space. The problem with all the confusion is the climate hoaxers are taking advantage of the ignorance of how elemental chemistry works by many. In the grand scheme of things the percentage of the entire population that even understands things like the carbon cycle or the nitrogen cycle is very small. Everything living on planet earth is carbon based it is the basic building block of life because carbon readily combines with many other elements. It is scientific malfeasance to blame carbon for what is natural cycles based on orbits, polar tilt and solar minimums and maximums. What I find truly disturbing as a legitimate scientist, not trying to line my pockets with government money by telling them what they want to hear just to fund my research, is that so few people are talking about the magnetic polar shift and the reversal that is predicted to come based on actual geological historical facts. There have been reversals in the past based on the alignment of atoms in magnetic minerals within layers in the rock strata. We do not know with any certainty what happens to the planet or atmosphere during a reversal shift in the poles north becomes south and south becomes north magnetically. What effect that will have on the Van Allen belts that surround the planet and protects us from the effects of cosmic radiation is only supposition. We can only guess at whether it will be a non-event or catastrophic change. Polar shift is slowly increasing in speed and distance each year and at some point it is expected to make a sudden snap shift to the reverse of the current status. If you are unfamiliar with this better do some research on your own and become educated about it.

If ones believes scripture this is a non issue. This world is about 6 thousand years old. Trillions, billion, or even millions is is a delusional fantasy. Man has made a mess of things for sure but he cannot control the weather nor the environment.

This world is way more that thousands. Carbon dating of fossils is scary accurate. Billions is the truth. If you're a man of God and of science like myself you would understand Gods time is not our. A day of his time maybe 10000 years of ours. We simply don't know.

While I appreciate presenting these planetary & Solar phenomena, there are relevant issues with environmental & natural destruction, altering the environmental spheres,
excessive resource extraction & consumption, waste, pollution, contamination, toxicity, eradicating & altering ecology & ecosystem function along with inhabitants & bioservices, beside matters involving socio-economic disparity & access, oppression, parasitic exploitation, corruption, ethics, morality, ...
Climate con exploitation, obfuscation, & corruption along with hypocrisy, proselytizing, & pedantry righteously needs confronted, criticized, exposed, resolved, & held accountable as does egregious abuse, harm, malfeasance, kleptocracy, & injustice.
Let justice be done though the Heavens fall

Agreed. Almost everywhere is a problem except for the United States.

My understanding is that the US is responsible for roughly 15% of the world's carbon output. The US is also the country that has invested the most, to date, to combat the issue within our borders. Could this be why there remains so many places around the world, from China and India, to undeveloped third-world nations, where this issue remains a major concern?

There are control freaks, that think once they have full power and control over all the Peasants and all their money. They will have the power to control the earth's complex climate. First, why don't they demonstrate how to control the sun, a volcano or large dumb rock traveling randomly in space? "Climate Change", on earth has been happening naturally for millions of years. Quote by Will Durant; "Civilization exist by geological consent, subject to change without notice."

They're not interested in demonstrating any of that!!
Their goal is to subjugate and dominate all humans by whatever means necessary...so they lie, cheat, steal and murder in order to succeed!!

The Lifespan of the Universe

The total lifespan of the Universe is 311 trillion and 40 Billion
years. This Universe is 155.522 trillion years old and it will end in

155.518 trillion years time. This calculation is based on the life of
Brahma.

There are millions of Universes with millions of Planets, with living
beings. This Planet Earth is simply a drop in the ocean of Planets.

All Universes have life, are closed, of different size and properties.

The whole material creation with Millions of Universes constitutes just a quarter of srishti (creations). The other three quarters of srishti (creations) is Spiritual, called Vaikuntha.

During the lifetime of each Universe, there are partial srishti (creations) and pralaya
(annihilation). At the beginning of each day of Brahma there is
creation and at the end of each day there is partial annihilation. One
day of Brahma is 4.32 Billion years; the night is also of the same
duration. We are currently half way through the current day of Brahma,
thus we have existed for approximately 2.16 Billions years in the
current small cycle.

Life Species

There are 8.4 million species of living beings in the whole of creation.

900,000 species of aquatic
2,000,000 species of plants
1,100,000 species of insects
1,000,000 species of birds
3,000,000 species of beasts
400,000 species of human beings

Not all these species are present on this planet.

Age of this Universe and Humans.

This Universe has existed for 155.522 trillion years and this is just
in the current cycle of creation and annihilation. Before this cycle
there were countless other cycles and after this cycle which will end in
155.518 trillion years time. There will be countless other cycles. The
cycle of creation and annihilation is based on the life of Brahma,
the engineer of the Universe. At the beginning of each day of Brahma,
he creates everything in this Universe and then at the end of each day,
there is partial annihilation Each day (12 hours) of Brahma is 4.32
billion years. Brahma lives for 311 trillion and 40 billion years, after
this time there is complete annihilation of this Universe and the
current Brahma dies. Then there is another Brahma and cycle repeats
itself. This Universe is the smallest in Gods creation. There are other
Universes, which are thousands and even millions of times bigger than
this Universe.

Within each day of Brahma, there are 14 Manus. We descend from the 7th Manu. Manu is the first man created by Brahma, and his wife, the first woman is called Satarupa.

There is a vast difference between the teachings of the Vedic
scriptures and non-Vedic scriptures. The Vedic scriptures are eternal
and the Vedic knowledge comes from God himself. The fact that the Vedic
scriptures are the oldest on the Planet proves that it’s the absolute
truth.

Age of World

EVAM VIDDYE RAHAU RATRAIH KAAL GATYOP LAKSHITAIH,
APAKSHITAMI VASYAPI (BRAHMANAH) PARMAPURVAYAH SHATAM.
YADARDHA MAYUSHASTASYA PARARDHAM BHIDHIYATE,
PURVAH PARARDHO UPKRANTO HRIYARODYA PRAVARTATE.

MEANING — Lord Brahma's age is 100 years. He has already crossed the first parardha

(50 years) and entered the second one. The process of creation begins
simultaneously with lord Brahma's day. At the end of the day night
starts and which is of same duration. One day of Brahma (constituting of
day and night) is equal to a KALPA of mortal world. There is a shloka in MANUSMRITI, which gives equation between a Kalpa (Brahma's day) and Chaturyugas or divine years. The shloka is as follows —

DEVIKANAM YUGANAM TU SAHASTRAM PARISANKHYAYAA,
BRAHMA MEKAM HAGYEYAM TAVATIM RATRIMEVA CHA.

MEANING — A Kalpa (day of Brahma) is equal to 1000 divine years or
Chaturyugas. The night descends at the end of his day and its duration
is same as the day.

A day of Brahma is equivalent to one Kalpa which
