

## Studies showing RF radiofrequency microwave radiation to be harmful to human health

There are an enormous number of . Thousands of studies conducted over the last 80 years have found a wide variety of bioeffects, including permanent DNA damage.

(2011) A study was published in the Journal of Fertility and Sterility that found exposure to WiFi laptops damaged DNA and the reproductive system in as little as 4 hours.

(2012) A study released by the Journal of Pediatric Urology showed WiFi causes DNA damage to rat's testes at the cellular level. Radiation levels were lower than what would be found in schools.

There are many other studies that have also found that RF microwave radiation causes genetic damage. Here are two reports that show this in detail: [Report by Dr. Henry Lai](#) [Report by Dr. Neil Cherry](#)

Swisscom, a leading telecom provider in Switzerland, admits that WiFi damages DNA in a patent application:

**"Thus it has been possible to show that mobile radio radiation can cause damage to genetic material, in particular in human white blood cells, whereby both the DNA itself is damaged and the number of chromosomes changed. This mutation can consequently lead to increased cancer risk. In particular, it could also be shown that this destruction is not dependent upon temperature increases, i.e. is non-thermal."**

International Agency for Research on Cancer Scientist states that RF radiation is a Class 2A Probable Human Carcinogen

[The Scientific Evidence Showing RF is a Class 2A or Class 1 Human Carcinogen](#)

Scientist Dr. Phillips describes industry attempts to suppress DNA damage research

See other video presentations on DNA damage on the [educational videos page](#)

## Leakage of the Blood Brain Barrier

In addition to DNA damage, another area of study is leakage of the blood brain barrier. Studies conducted around the world show that this happens at comparatively low levels, and in as little as 2 hours of exposure.

## Studies Show a wide variety of adverse biological effects

Although there are few studies on WiFi, there are many on cell phones, cell phone towers, and general RF radiofrequency radiation. RF radiation has been found to increase the risk of cancer, disrupt melatonin, effect thyroid function, cause leakage of the blood brain barrier, decreased cognitive function, and a long list of many other bioeffects.

Most of us aren't aware that every long-term case-control cell phone study has found an increased risk of cancer. [Research](#) has also shown that children absorb more radiation than adults, leading to significantly increased cancer rates for those who started using a cell phone before the age of 20.

## Comparing to Background Levels

In the chart below the unit of measurement is nanowatts per square meter. Although this is an

unorthodox unit of measurement, it's it is useful in that it allows us to accurately compare to background levels. (1 nanowatt = 0.001 microwatts)

## A Comparison of WiFi Emissions to Scientific Research

<b>Radiation Levels</b> (nW/m2)	<b>Effects</b>	<b>Researcher</b>	<b>Year</b>
<b>10,000,000,000</b>	<b>FCC Exposure Guidelines, 30 min public exposure, based solely on thermal effects</b>	<b>FCC</b>	<b>1986</b>
<b>90,000,000</b>	<b>iPads and WiFi enabled laptops - direct body contact</b>		
60,000,000	DNA damage in cells	Phillips	1998
52,500,000	Induced stress response	Kwee	2001
<b>35,000,000</b>	<b>1 foot from iPads and WiFi enabled laptops</b>	Khalid	2011
50,000,000	Impaired nervous system activity	Dumansky	1974
50,000,000	Drop in NK lymphocytes (immune function decreased)	Boscolo	2001
40,000,000	Slowed memory/alterd immune function in children	Chiang	1989
40,000,000	Changes in hippocampus, part of brain memory, learning	Tattersall	2001
30,000,000	Irreversible infertility (in mice at 3 generations)	Magras	1997
20,000,000	Double-strand DNA damage	Kesari	2008
13,000,000	2x rate of leukemia in adults	Dolk	1997
12,500,000	Affected kidney development	Pyrpasopoulou	2004
10,000,000	Headaches, dizziness, irritability, fatigue, weakness, insomnia, chest pain, difficulty breathing, indigestion	Simonenko	1998

wireless\_compared\_to\_studies\_nano\_web.pdf

## Cell Phone Towers

WiFi radiation is very similar to that of cell phone towers, in that it is chronic full body exposure to microwave radiation, although levels of radiation in WiFi classrooms are actually higher than next to a cell phone tower.

## Radio and Cell Tower Epidemiological Studies

### Cell Tower Studies

Dode (2011): Increased risk of mortality due to malignant tumors. (600 meters or less)

Eger (2004): 3x the risk of cancer after 5 yrs of exposure. (400 meters or less)

Hutter (2006): Increased risk of headaches, tumors, loss of appetite, exhaustion, and difficulty concentrating.

Oberfeld (2004): Increased risk of fatigue, irritability, headaches, nausea, loss of appetite, sleeping disorders, depressive tendency, difficulty concentrating, skin disorders, and cardiovascular problems. (400 meters or less)

Santini (2002): Increased irritability, depressive tendencies, difficulties concentrating, loss of memory, dizziness, sleep disruption, skin problems. (200 meters or less)

Wolf (2004): 4x increased risk of cancer overall. 10x risk for females. Short latency of 2 years.

Here is a document that shows several radio and cell tower studies, complete with abstracts. [epidemiological\\_studies.pdf](#)

## Subjective Symptoms

In the following chart, from a cell tower study by Santini, 2001, you can see that the closer to the transmitter, the higher the % of respondents

experiencing symptoms. Red represents a distance of less than 10 meters away, and fatigue was experienced by 70% of those studied, followed by headaches, difficulty concentrating, and memory loss. Black represents those that were over 300 meters away, and as a comparison, only 25% experienced fatigue.

For some new to this area of study, it may appear as if these wide ranging symptoms are too varied to be true. Further investigation into archived research will show that these issues have been reported for decades from studies all around the world. In fact, the Russians used to call it "Microwave Illness" back in the 1960's and 1970's.

Our modern reality of using cell phones, bluetooth, and all kinds of other devices doesn't take into consideration that we are placing microwave transmitters next to our heads, on our bodies, and near our reproductive organs. More than this, we are unknowingly filling our homes, towns, cities and countryside with a smog of microwave radiation.

New study confirms previous cell tower results:

Chronic microwave radiation exposure causes adverse health effects
